

T-Series

Reduced torque. Absolute isolation.

MOGAS[®]

T-Series trunnion isolation valves are ideal for the following applications:

Oil & Gas

Drains and secondary isolation

applications for:

- Heater vessels
- Steam applications
- Vents
- High pressure air
- Quench and flash vessels
- High cycle applications

Power Generation

- Boiler feed water
- Fuel gas lines

Chemical / Petrochemical

- Hydrocarbon
- Vapor products
- Slurry
- Liquid
- Large diameter applications
- Amines, MDEA

Refining

- Oxygen, hydrogen, nitrogen
- Cold, high pressure separation
- Cutting water pump isolation
- Reactor overhead line
- Amines

Autoclave

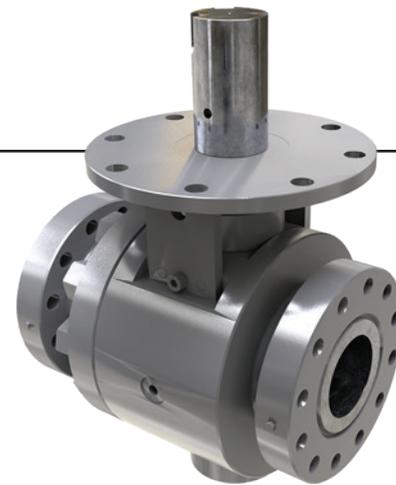

- Steam/recovery plant

Slurry Transportation

- By-pass lines
- Underground dewatering
- Seawater pipelines
- Industrial waste water

MOGAS Quality in a Trunnion

Reduced Torque. Absolute Isolation.

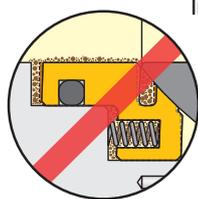

For almost half a century MOGAS built its reputation as a pre-eminent manufacturer of severe service ball valves. The T-Series trunnion valve continues that tradition using the same proven process cycle: valve expertise, service support, industry knowledge and a desire to innovate. Today, we are the dominant severe service technology company, and provide world-renowned services and the best severe service, application-specific products.

Safety

Safety isn't expensive. It's priceless. And it's built into all MOGAS products. The T-Series trunnion ball valves provide a high level of integrity (SIL 3) for tight shutoff. Safety features include a unique upper bonnet design that minimizes fugitive emissions, and a blowout-proof anti-static stem that prevents sparking from static electricity buildup.

Reliability and Durability

In applications with even low concentration of silt, ash, dust or rust, trunnion designs that use coil springs accumulate these fine particles in the spring pocket. This results in little or no free motion in the spring area, which can cause deflection of the seat and seizure of valve. Preferentially, the MOGAS T-Series trunnion design uses durable pressure-energized disc springs that provide constant pressure evenly distributed around the seat. It also incorporates a plug trunnion, which

is simpler to maintain than the block trunnion design, and eliminates leakage associated with typical plate-supported trunnions. **Design features on pages 4–5.**

Lowest Cost of Ownership

Because MOGAS valves are more durable and have a long life cycle, they cost less over time. T-Series valves offer many features that contribute to a longer lasting valve, such as a wider ball/seat sealing surface, compared to competitor seat faces. This means reliable isolation and less downtime from unplanned shutdowns.

Service

When you select MOGAS products, service is a big part of what comes with them. The MOGAS commitment to service means more than basic maintenance. It also means timely access to our knowledgeable and experienced team of experts, anytime, anywhere in the world. And when our team becomes part of your team, you can trust that we will do everything we can to come through for you. **See page 10 for service details.**

Warranty

Every MOGAS valve comes with a statistically driven, application-specific PERFORMANCE GUARANTEE...plus a Lifetime Warranty on materials and workmanship. **See page 12 for more information**, or contact us and ask us how we can guarantee the performance of our valve in your application.

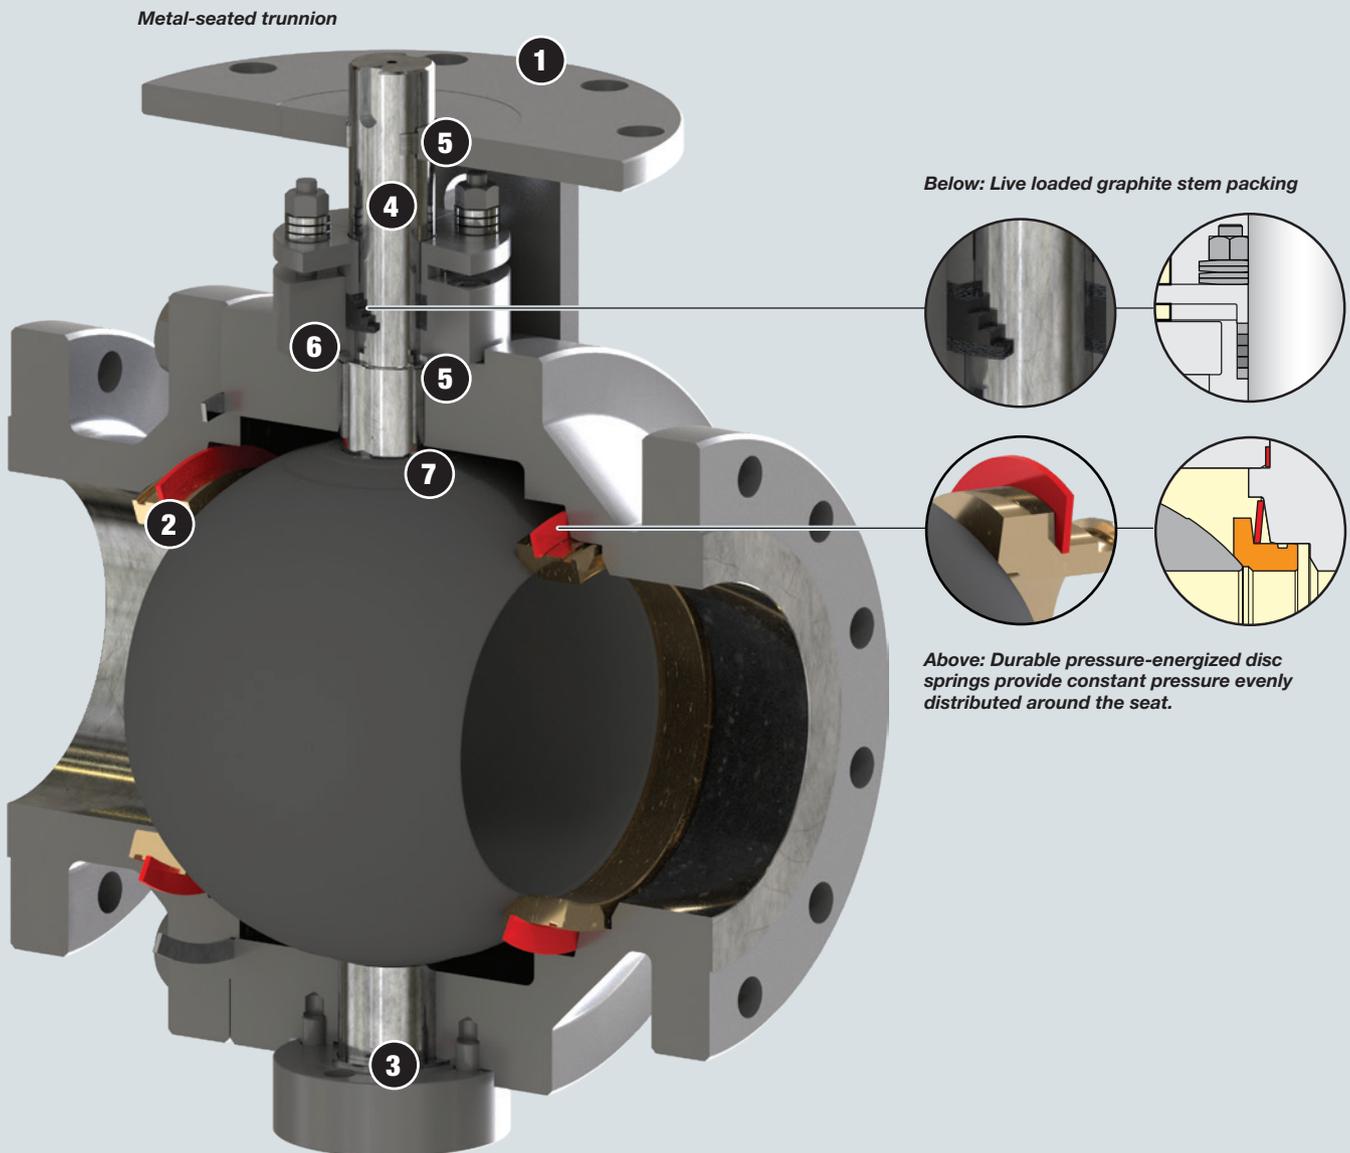

This 36-inch T-Series trunnion valve replaced a valve that was under constant repair in a mining operation. See case study on page 9.

Features and Benefits

Metal-seated or Soft-seated Designs

- 1 Independent actuator mounting pad attached to body**
 - Precision machined to ensure precise stem alignment
 - Body absorbs torsional load from actuator operation transmitted through brackets
- 2 Simple disc spring design**
 - Durable design compared to multiple coil springs
 - Particle tolerant
 - Consistent support around seat circumference
- 3 Plug / stem lower trunnion design**
 - Enhances serviceability
 - Eliminates complexity and leakage associated with typical plate-supported trunnions
- 4 Blowout-proof anti-static stem**
 - Unique upper bonnet design minimizes fugitive emissions
 - Anti-static design prevents sparking from static electricity buildup

5 Independent upper and lower stem sleeve bearings

- Provides full stem support
- Reduces lateral load
- Prevents galling
- Extends packing life

6 Inner stem seal technology

- Reduces friction between anti-blowout shoulder and upper bonnet
- Prevents solids from migrating to soft stem packing, extending packing life

7 Low-hysteresis drive design

- Precision tolerances ensure accurate positional control
- Handles rapid cycling

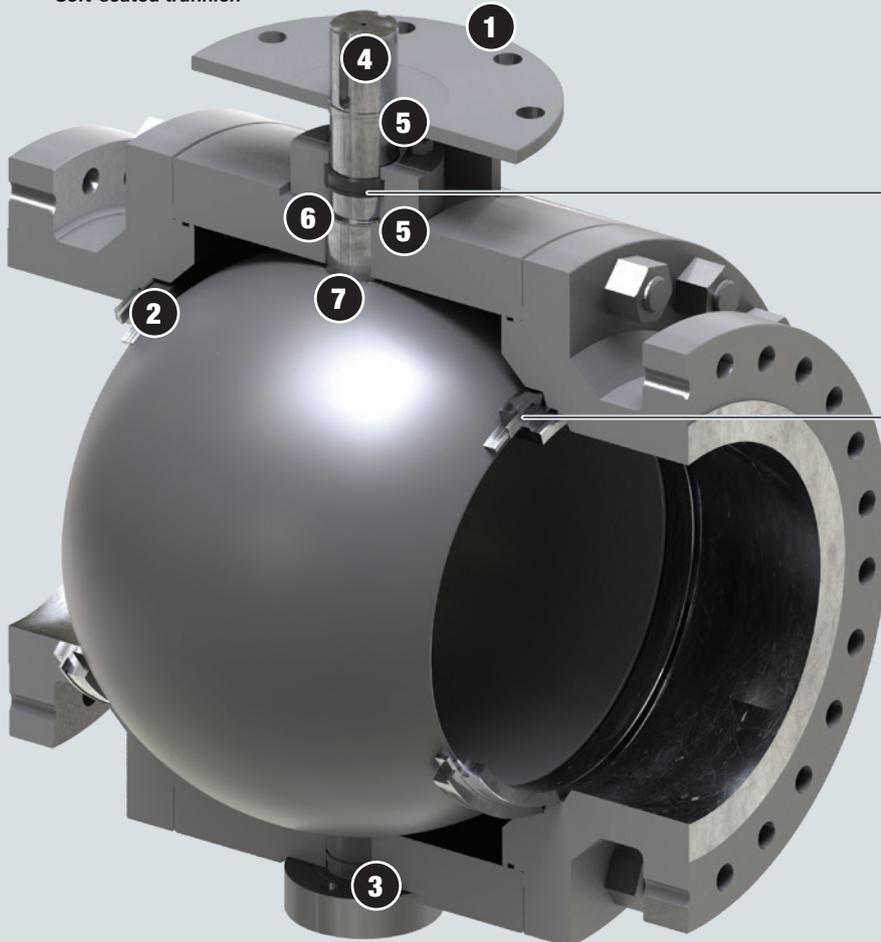

Design

- 3 to 60 inch (80 to 1500 DN)
- Bi-directional
- API 6D or ASME B16.34
- Suitable temperature range:
-50 to 400° F (-46 to 204° C)
- Suitable for high-cycle services

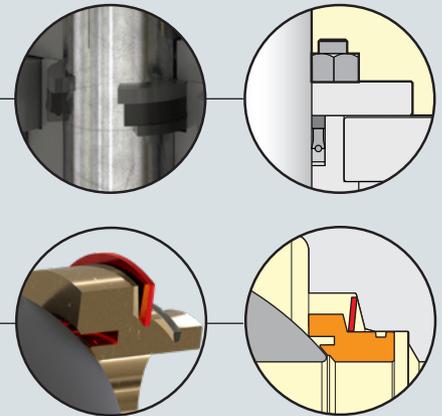

Options

- ASME 150 to 2500 Class (not all size / pressure class combinations available)
- Metal seated or soft seated
- Fire safe design
- Cast or forged body; 2- or 3-piece
- Process and customer specific body and trim materials
- Process and customer specific coatings
- Adjustable or non-adjustable stem packing
- Spiral-wound body gasket or O-ring body joint seals

Soft-seated trunnion

Below: PolyPak® stem packing

Above: Durable pressure-energized disc springs provide constant pressure evenly distributed around the seat.

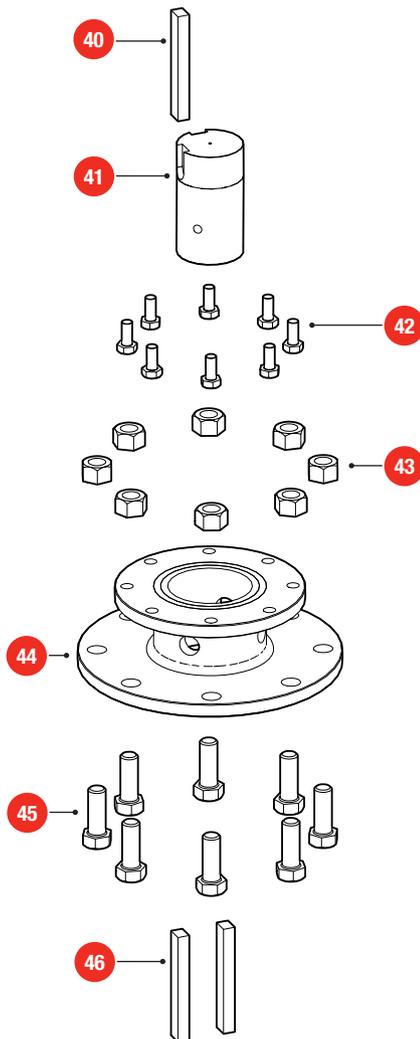

Parts List

Metal-seated

Adaptor Part Reference Numbers

Item	Description
40	Actuator Key
41	Stem Adaptor
42	Actuator Mounting Bolts
43	Actuator Mounting Flange Nut
44	Actuator Mounting Flange
45	Actuator Mounting Flange Bolts
46	Stem Adaptor Keys

Actuator adaptation kit may vary depending on the actuator.

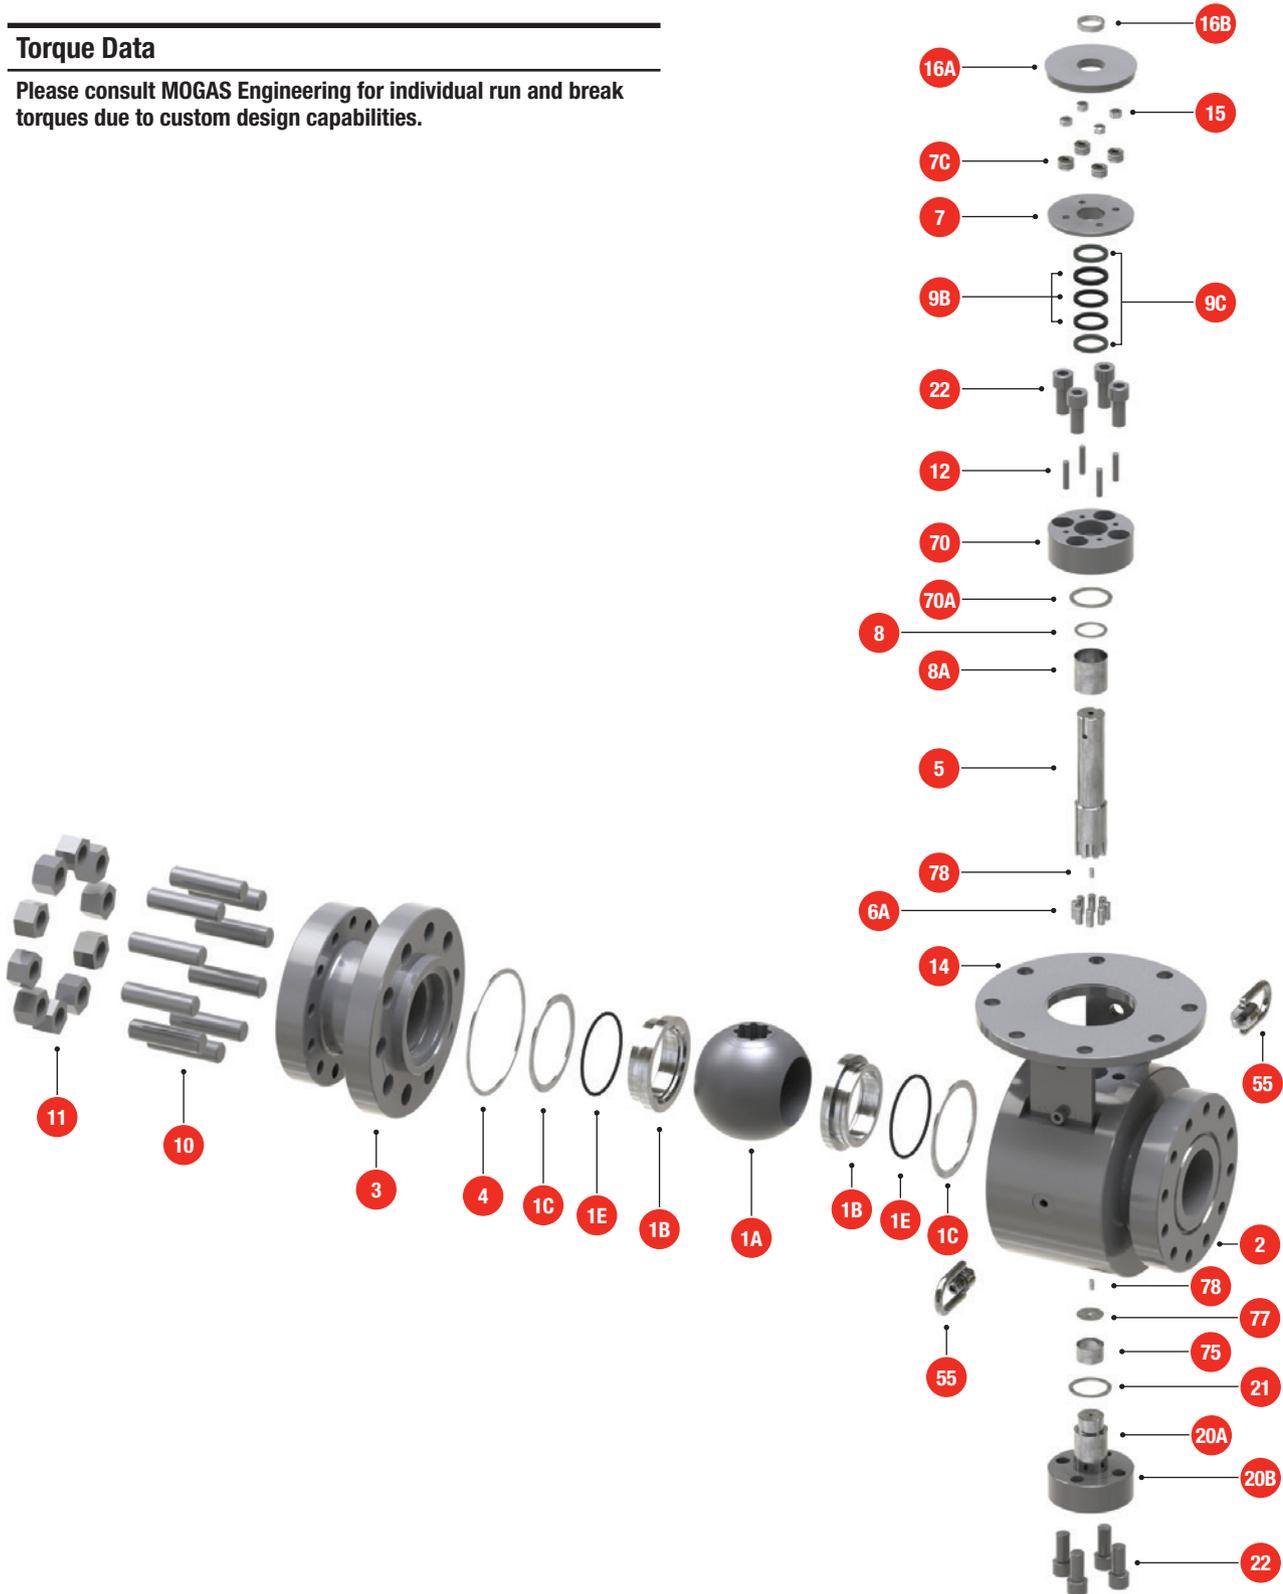

Valve Part Reference Numbers

Item	Description	
1A	Ball	
1B	Seat Ring	
1C	Disc Spring	
1D	Seat Insert	for soft-seated valves
1E	Seat O-Ring	
1H	Backup Ring	for ASME Class 900 and up
2	Body	
3	End Connection	2-piece design (qty 1); 3-piece design (qty 2)
4	Body / End Connect Seal	for spiral wound gasket
4A	Backup Ring	for ASME Class 900 and up
5	Stem	
6A	Drive Pins	
7	Gland Plate / Flange	
7C	Live Load Springs	
8	Stem Thrust Bearing	
8A	Stem Sleeve Bearing	
9A	Stem Packing Backup Ring	Soft Seat only
9B	Stem Packing	Soft Seat: PolyPak®
9C	Stem Packing Anti-extrusion Ring	Soft Seat: PIP ring
10	Body Stud	
11	Body Nut	
12	Gland Stud	
14	Mounting Flange	
15	Gland Nut	
16A	Mounting Flange Bushing	
16B	Mounting Flange Sleeve Bearing	
20A	Plug Trunnion	
20B	Trunnion Plate	
21	Trunnion Seal	O-ring or spiral wound gasket
22	Bonnet & Trunnion Capscrews	
55	Hoist Ring	
70	Bonnet	
70A	Bonnet Seal	O-ring or spiral wound gasket
75	Trunnion Sleeve Bearing	
77	Trunnion Thrust Bearing	
78	Anti-Static Device	

Torque Data

Please consult MOGAS Engineering for individual run and break torques due to custom design capabilities.

Case Study

Seawater Transport

Not all end users understand what defines a ‘severe service’ valve. And not all valve companies have the experience to truly understand the severity of an end user’s process.

Challenge

A South American mining operation was commissioned, with commercial production to start the following year. The mine operated with the use of seawater transported through a pipeline from the cooling systems of a power plant 90 miles away. Fouling occurs in seawater and damages equipment through:

- crystallisation (from calcium carbonate, calcium sulphate and other salts)
- corrosion from oxidation
- biological growths from bacteria and organisms
- the settling of particulates, such as silt, mud and sand

These fouling factors, coupled with galvanic corrosion and debris-packed coil springs behind the seat, compromised the seal of the thermoplastic polymer seat. The valve began to leak past the O-ring at the end connection and body. Because the valve was located near the sea, corrosion to all external ferrous materials escalated.

Three repair attempts at significant costs were made by the original valve manufacturer to replace the sealing components with metal seats. Each repair survived for one day, and the OEM’s customer support waned after each attempt.

Solution

Ultimately, the solution came from industry and field knowledge, valve expertise, insanely customer-centric service and innovative valve designs. MOGAS design standards are ideal for corrosive environments, and has experience with seawater applications. Replacement valves were provided with a nickel-based super alloy inlays on all sealing surfaces and through the bore. These valves also used a metal-seated ball valve (not soft seating), supported by a live-loaded disc spring to maintain a tight seal. All external components were painted with an improved paint specification above industry standards to insulate from the salty humidity.

Results

The single biggest reason the end user chose MOGAS was because of their proven customer service. Recognized industry-wide as experts in severe service technology, MOGAS service personnel local to the area were quickly on site to identify the problem and offer a lasting solution.

Conditions

Application:	Seawater transport
Temperature:	85° F (30° C)
Pressure:	2,220 psig (153 bar g)
Valve Model:	T-Series (Trunnion)
Valve Size:	36 inch (900 dn)
No. of Valves:	1

Material loss in the seat pocket was caused by galvanic corrosion, allowing leakage around the valve seats.

Fine silt packed the coiled spring pockets preventing free motion and an effective seal.

Service

Global Capabilities

We provide exceptional service for unique locations—everyday, everywhere.

MOGAS' proven process includes industry experts, innovative engineers, tenured manufacturing personnel and a support team whose motto is 'Anytime. Anywhere'.

Service Excellence in Action

When you select MOGAS products, service is a big part of what comes with them. The MOGAS commitment to service means more than basic repairs. It also means timely access to our knowledgeable and experienced team of experts—anytime, anywhere in the world. And when our team becomes part of your team, you can trust that we will do everything we can to come through for you.

When you have a problem, our technical advisors get to the root of it. They will look at your entire application to accurately identify and solve the issue. Using a comprehensive approach helps you improve equipment reliability and operational efficiency, as well as reduce costs. Our core services include:

Project Support

- Installation, startup and commissioning
- Shutdown planning and implementation
- Procurement and contract management

Preventive Maintenance

- Complete system inspection
- Routine maintenance, valve repacking
- Valve asset management

Repair, Refurbish & Customization

- 24-hour emergency response
- Troubleshooting
- Valve performance analysis
- 3D finite analysis
- High pressure testing
- Online repair documentation

Asset Management Plan

Optimize Your Investment

Getting more **value** for every dollar is now more important than ever. To help **minimize your total cost of ownership** while truly benefiting from predictive maintenance, MOGAS offers the **MORE™ Asset Management Plan**—a totally customizable valve purchase and service plan. Whether you buy a few valves or several hundred valves, you can choose from a variety of options to help optimize your investment.

On-site Services

- Start-up and commissioning assistance
- Field support and troubleshooting
- Quarterly walkdowns
- Major shutdown planning

Managed Inventories

- Revolving dedicated inventory (located and managed at MOGAS facility)
- On-site inventory (for emergency use)

Walkdown Evaluations

- On-site inspection of installed valves
- Customized reports

Valve Management Program (Online)

- Initial setup, input, links to P&ID and maintenance reports
- Repair history
- Performance analysis reports
- Incident reports
- Valve repair cost
- Valve torques
- Revised bills of material
- Revised drawings
- Predictive / preventive maintenance recommendations

Certified Training

- Lunch-n-learns
- Valve installation & operation (hands-on)
- Maintenance & troubleshooting

Get **MORE™**...with **MOGAS®**
MANAGING OPERATION & REPAIR EXPENSES

- *Technical Assistance*
 - *Dependable Operation*
 - *Preventive Maintenance*
 - *Data Collection*
 - *Proactive Communications*
 - *Value Pricing*
-

Confidence for Tomorrow

A Warranty is Not a Performance Guarantee

CONFIDENCE

PREDICTABILITY

RISK FREE DECISIONS

IMPROVED SAFETY

ENHANCED RELIABILITY

LESS DOWNTIME

ANTICIPATED BUDGETS

Only from MOGAS

Due to continuous years of research and development, coating improvements, proven manufacturing techniques and application experience, we now offer an unprecedented application-specific PERFORMANCE GUARANTEE on our metal-seated isolation and control valves. Years of continual valve performance analysis, field reports and statistical service data from around the globe provide the information required to guarantee our valves for a performance time period. Now every MOGAS valve comes with a statistically driven, application-specific PERFORMANCE GUARANTEE...
plus a Lifetime Warranty on materials and workmanship.

Severe Service

The MOGAS Definition

- Extreme temperatures
- High pressures
- Abrasive particulates
- Acidic products
- Heavy solids build-up
- Critical plant safety
- Large pressure differentials
- Velocity control
- Noise control
